

APPLIED MATH SPOTLIGHT

SARAH FREY

My research interests are in math and science education. I also have a background studying problems in continuum mechanics and non-linear elasticity theory, particularly with applications in planetary science.

About Me

- I love teaching math and welcome any opportunity to connect with students!
- I have an awesome kitty named Buffy who is my adventure companion. She has travelled to over a dozen different states, walks on a leash and even goes kayaking with me!
- I went to grad school at the U of Arizona. I am loving the hot Merced summer, as it reminds me of Tucson.
